

Breast are
beautiful

Imaging tech protects
us from getting sick.

Breast cancer is most common cancer for individuals assigned female at birth.

But good screening practices have been linked to better survival rates

But still, a remarkably
low amount of
individuals go to
screenings as much as
they should

“This paper” segments individuals' barriers to screenings as X,Y, and Phycological .

Phycological barriers are often overlooked in healthcare.

How do we acknowledge patients
psychological barriers to improve patient
outcome?

How do Mammograms work?

Sources of Pain

The cost of avoiding screening

cmAssist

CAD THAT WORKS

CureMetrix **cmAssist**[®] is an investigational, computer-aided detection (CAD) software that has the potential to quickly detect key regions of interest on a mammogram, and accurately quantify and classify the anomalies as suspicious or verifiably benign. **cmAssist** does this by searching all views of a digital 2D-mammogram for abnormal areas of density, mass or calcification and by highlighting any suspicious areas needing further analysis. The software utilizes a unique, data-driven neuScore[™] which is a quantitative measure of suspiciousness of a region of interest ranging from 0 (least suspicious) to 100 (highly suspicious). Once validated, **cmAssist** can as a clinical decision support tool that will enable physicians to:
